

Faculty of Forestry
University of Toronto
July 7, 1951

Dear Prof. Fisher,

I was very pleased to receive your Christmas card. The very excellent likeness brought back very vividly recollections of your visit to us last year, which was a very pleasant experience for us. I passed your card along to Dr. Dolany as he said the card he received from you was of a different subject.

Mr. Morrison got
a very good result from
fitting the 6-term equation
to his tree volume data.

The analysis of the comparative
effect of omitting various
terms was rather interesting.

With kindest regards,

Yours sincerely

Madan M. Dey
