My dear Ron,

I am so glad you are interested by the green-flowered primrose, and that someone in your department may be able to look into its genetics. It really would be rather nice to have the outstanding parent settled. I will write at once and see if I can get a root.

I am extremely pleased to hear you think Gordon's paper worth publishing. It seemed so to me. Certainly it would be very nice if there could be a colored plate. I do think that of the highest value (if it can be managed) for their color factors. I am sure Gordon will be greatly encouraged.

In regard to your note about Knight's paper, I absolutely agree with what you suggest. Shall I go through it and add a few explanatory paragraphs for your consideration?

I am so glad you feel it would be in order.
for Her Majesty to publish such a reply.

I do feel rather strongly that Mr. Wright's paper on evolution ought not put to be left unanswered.

Yours sincerely,
