Lover Terrace

Dear Dr. Fisher,

I hear that the late Prof. Cork, Pearson investigated the comparative attainment of the earlier and later children of a family. Can you put me in touch with his result?

Could you lend me the papers in which they were published?
hurried to return any need without undue delay.

Have you yourself any fact bearing on the question: now the

Hind red and whether children born

after some years of marriage are

better or worse in different from

those born in the first few years?

or whether exposed children are

better than those which come in

nature wise, or so whenever

asserted by Marie Stopes?
I should be glad of anything you hear on the subject.

Yours sincerely,

P. E. Young.
