26 April 1932.

Dr. Charles Jordan,
Maria-utca 46,
BUDAPEST, viii,
Hungary.

Dear Dr. Jordan:

I am obliged for your letter of 20 April.

I enclose under separate cover copies of

(a) The sieve of Eratosthenes
(b) Tests of significance in harmonic analysis
(c) A method of scoring coincidences in tests with playing cards
(d) The statistical method in psychical research

I add also

(e) The theory of statistical estimation
(f) Moments and product moments of sampling distributions, with its sequel;
(g) Moments of the distribution for normal samples of measures of departure from normality

which are less casual contributions to the development of statistics, which seem not to be readily available outside England and America.

I should be glad to possess any of your works in French or English, and am especially glad to have a copy of your paper on interpolation without differences.

Yours sincerely,
