

July 31, 1939

Dear Dr Nabours,

It is indeed good of you to think of offering to send me, from time to time, breeding data of your grouse locusts before they can be published. I should certainly be glad to take advantage of this proposal.

The paper embodying the results given in my address to the B.A. last year has now appeared in the Annals of Eugenics, and I only await offprints to send you a copy. You will see that I have made some revision of the breeding data in Paratettix eurycephalus embodying the correction you sent me and making distinction according to the number of dominant factors involved.

Yours sincerely,
