
My dear John,

Thanks for your letter of March 10th. I am exceedingly glad to hear that they are going ahead with blood groups and disease in the mid-west, as I think they are bound to do in many parts of the world under the impulsion of your own work.

I have just received a nice batch of twin studies on smoking from Vorschuer, and an puzzling out the German names for the different types of cigar-like objects which they smoked. I hear also that some similar work is being done in Sweden.

Sincerely yours,
