June 13, 1941

Dear Fraser Roberts,

Thanks for your letter and for your news as to the blood-group classification. You will still have a standard error of over a year for the mean AB's in 5000, so I should not yet say they differed from Leeds. On some 17,000 the AB's there are in about .8 younger for the men and .4 in the women than the O's. I still want more to make a satisfactory comparison.

Thanks for letting me know about the Burden Trust Committee. Taylor will be with us on the 19th, and we must have a talk about blood groups. If you could stay over until next day, this would be extremely useful on the points you mention, and I might try to get Taylor to do the same.

Yours sincerely,
