
By dear Fraser Roberts,

Many thanks for sending your interesting new information on ABO and ulcers. There is, as perhaps you know, though many people seem not to, a nice $x^2$-test, for one degree of freedom, for testing frequencies such as you give for parity and 0. It is published in a paper by S. H. Holt. The reference is *Annals of Eugenics*, Vol. 14, page 148. Perhaps you would like to have the paper.

Yours sincerely,

Enc.
