10th May, 1958.

Dear Eliot Slater,

It is exceedingly kind of you to have had the smoking questionnaire drawn out for me. The pipe-smokers seem to be rather on a limb, but I suppose the data would be good for smokers versus non-smokers simply. The comparison of separated and unseparated pairs is a most valuable feature. These data seem clearly to concur with others in showing considerable genotypic differences between the smoking classes. Thanks again.

Yours sincerely,
