28 July 1944.

Dear Dr. Strathen,

Thanks for your note. It is not to be expected that all of these phenotypes will be of the genotype sought for. I agree, of course, that this becomes improbable when RH' or Rh' is present in the relatives. A few cases, however, with either parents or children located should clear the matter up finally. I shall be very much interested to see what you have for the Annals.

Yours sincerely,
