26th. October, 1929.

Professor G.H. Watson, Sc.D., F.R.S.,
The University,
Edgbaston,
BIRMINGHAM.

Dear Professor Watson,

I do not think we should delay longer in printing Jacob's paper. It is not altogether the author's fault that it is still rather obscure, and I think it is really worth putting on record.

My page proofs were returned at the end of last week.

Yours sincerely,

S.M. Jacob
"The enumeration of the latin rectangles of depth three by means of a formula of reduction with other theorems relating to non-clashing substitutions and latin squares,"
