27th. April 1950.

My dear Wilkes,

I have now seen your letter of 1st. April enclosing the tabular solution of the differential equation I was worried with.

It is extremely kind of you to allow the machine to be used for the purpose, and of D.J. Wheeler to carry it out. I am having the table copied and so have not yet had the pleasure of examining it closely. I think later it should be printed and should be glad to know what you do about co-authorship in such a case; e.g. if it were printed in Fisher and Yates Statistical Tables should it appear with a note on the same page "calculated on EDSAC by Wilkes and Wheeler"? Anyway, let me know your views on the matter.

Yours sincerely,
