17 February 1931.

Professor Sewall Wright,  
Dept. of Zoology,  
The University,  
Chicago, Ill.,  
U.S.A.

Dear Sewall Wright,

I very much hope I shall have a chance of seeing you again during the summer.

So far my plans are to arrive at Iowa by June 12, leaving perhaps a day or two for visiting in the New York area; to stay at Iowa, with long week end excursions, till near the end of July, and to lecture at Minnesota during August, bolting back just as soon as the lectures are finished about the end of the month.

If you can forecast your own movements during the summer, I think I ought to be able to catch you for a good long talk some time. I do think that differential selective action in different stations or regions may be <sup>increasingly</sup> ~~increasingly~~ important, even if there is a steady diffusion of germ plasm between them. Let me know what the prospects are of meeting you.

Yours sincerely,

R. A. Fisher
