Abstract

**Background**
A healthy workplace culture enables nurses to experience valuable learning in the workplace. Learning in the workplace is valuable as it can enable the provision of evidence based and continuously improving safe patient care, which is central to achieving good patient outcomes. Therefore, nurses need to learn within a workplace that supports the implementation of evidence based, professional practice and enables the best patient outcomes; the influence of workplace culture may play a role in this.

**Objectives**
To critically appraise and synthesize the best available qualitative evidence to understand both the nurse’s learning experiences within the workplace, and the factors within the workplace culture that influence those learning experiences.

**Inclusion criteria**

**Participants**
Registered and enrolled nurses, regulated by a nursing and midwifery authority and/or recognised health practitioner regulation agency (or its international equivalent).

**Phenomena of interest**
The nurse’s learning experience, either within an acute health care workplace, or within a workplace related learning environment and the influence of workplace culture on the nurse’s learning experience (within the workplace, or workplace related learning environment).

**Context**
This review considered studies that included nurses working in an acute health care organization within a Western culture.

**Studies**
This review considered studies that focused on qualitative evidence and included phenomenological, grounded theory and critical theory research designs.

**Search strategy**
Published and unpublished studies in English from 1980-2013 were sought using a three-step search strategy.

**Methodological quality**
Methodological quality was assessed by two assessors using a standardized checklist from the
Joanna Briggs Institute (JBI) Qualitative Assessment and Review Instrument (QARI).

Data collection
Qualitative data was extracted from included papers using the JBI-QARI standardized data extraction tool.

Data synthesis
Qualitative research findings were pooled using the JBI QARI Instrument. This involved the aggregation and synthesis of findings to generate a set of categories which were then subjected to a meta-synthesis in order to produce a single comprehensive set of synthesized findings that could be used as a basis for evidence-based practice.

Results
Fourteen articles were identified following appraisal and a total of 105 findings (85 unequivocal and 20 credible) were extracted from included studies and grouped into eight categories based on similarity of meaning. Subsequently, categories were grouped into two synthesized findings. The two synthesized findings were as follows:

1. Organizational influences
   Enabling nurses to demonstrate accountability for their own learning, along with clear organizational systems that provide resources, time, adequate staffing and support, demonstrates encouragement and value of nurses’ learning and education.

2. Relational Dynamics
   Nurses value their peers, expert nurses, preceptors, mentors and educators to facilitate and encourage their learning and professional development.

Conclusion
An optimal workplace culture is central for nurses to experience valuable and relevant learning in the workplace. To emphasize the importance of nurses’ learning in the workplace, working and learning is understood as an integrated experience. Consequently, a dual system that enables nurses to demonstrate accountability for their own learning, along with clear organizational and educational systems is required to demonstrate the value in nurses’ learning and education.
Declaration

I, Kate Davis, certify that this work contains no material that has been accepted for the award of any other degree or diploma in any University of any other tertiary institution, and, to the best of my knowledge and belief, contains no material previously published or written by any other person, except where due reference has been made in the text. In addition, I certify that no part of this work will, in the future, be used in a submission for any other degree or diploma in any university or other tertiary institution without the prior approval of the University of Adelaide and where applicable, any partner institution responsible for the joint award of this degree.

I give consent to this copy of my thesis, when deposited in the University Library, being made available for loan and photocopying, subject to the provisions of the Copyright Act 1968.

I also give permission for the digital version of my thesis to be made available on the web, via the University’s digital research repository, the Library Catalogue, and also through web search engines, unless permission has been granted by the University to restrict access for a period of time.

Acknowledgements

I would like to thank my supervisors, Dr Sarahlouise White, my primary supervisor, for her vibrant encouragement, flexibility and support; her pithy observations and intelligent guidance always assisted with focussing my vision. Also, to Dr Matthew Stephenson my co-supervisor, for his eye for detail, intelligent thoroughness and consultative approach regarding my chosen topic and qualitative research paradigm.

My thanks and appreciation also extend to Caroline Whiteford, (MSc candidate) for her insightful and timely critical appraisal, belief in me and encouragement; I would also like to acknowledge librarians Maureen Bell and Lucy Zuzolo, for their support in developing and executing a search strategy suitable for the systematic review within this thesis.

Thank you to the Joanna Briggs Institute staff for all their support over the past 2 years, in particular Dr Micah Peters for his academically rigorous ethic and to the other Masters and PhD students, for their ongoing encouragement and commitment to their studies and practice.

Finally, I would like to express my thanks and appreciation to my husband Luke and three children, who have all made the time and space for me to pursue my studies with passion and joy.
